Report Explanatory Notes Page

This report presents data that is aggregated and is a snapshot in time.

Aggregated means that it is summed up to a particular level and certain calculations have been performed at that level.

Also, this data is a snapshot of the "live" data on the database as of a certain date. On the report, the date of aggregation is labeled AS OF. This is the date through which the data was last aggregated. Even though the process to aggregate the data may have been done two weeks later, the AS OF date represents the cut-off date for the data that was to be included in that aggregation.

The user can only put in either CIN(s) or CIN PREFIX(s) along with the other parameters. The user can not put in both -- only one.

The UIC total line is the moving average for that UIC. If you only pick 3 of the 10 CDPs that make up that UIC, the total will reflect the data for those 3 CDPs. The parameters you put in limit not only which CDPs will appear but also what is included in the UIC total line.
